

LIMESTONE

French Vanilla™

Ebony™

Capri™

Crema Havana

Sample the refined simplicity of Limestone. These natural stones hail from the Mediterranean and South Asia regions where for centuries they have been valued for their luxurious texture and consistent colour.

Choose between French Vanilla™ with its tan and honeyed brown colours, the darker charcoal coloured Ebony™ or the brilliant off-white Capri™.

LIMESTONE

SIZES

Enquire at any one of our showrooms for available sizes.

RECOMMENDED APPLICATIONS

Ebony™ and French Vanilla™ Limestone are suited for interior and exterior use on floors and walls. Capri™ and Crema Havana, due to their paler colour and smoother surface texture are best suited for interior use on floors and walls and exterior use on walls.

As this is a natural product, one can expect slight colour variations between batches. Please arrange a product preview, either by photograph, or at one of our distribution centres in order to view the current stock.

LAYING RECOMMENDATION

- A 5-10mm joint between tiles(2mm for Crema Havana) - We do not recommend butt joining tiles
Larger format tiles require a minimum of 10mm joint thickness
 - The use of white tile adhesive adhesive fo Capri™ and Crema Havana
The use of grey tile adhesive adhesive fo French Vanilla™ Ebony™
 - French Vanilla™ - 2 parts Travertine grout to 1 part building sand
Ebony™ - 2 parts grey grout to 1 part building sand
Crema Havana- Travertine grout
Capri™ - Ivory grout
or grout colour to individual taste
 - No acid is to be used in the removing of grout/adhesive residue
 - Existing expansion joints are to be respected and not tiled over
 - Use expansion joints as prescribed by architect or specialized tiler
 - Tiles should be laid on a level and even screed which should have been cured for about one week before tiling
 - Naturally each piece is unique in veining and tonality therefore the onus rest with the installer to ensure blending is done correctly before laying the tiles to achieve your desired effect.
-

PRODUCT CARE AND MAINTENANCE

All natural stone tiles should be sealed to prevent staining. The laid tiles should be washed with Stone Shield Deep Clean which is a stone detergent. The tiler must ensure that no grout or adhesive is allowed to dry on the tile surface. After washing and rinsing the stone must be left to dry completely including grouting. As an anti-stain treatment we recommend the use of Stone Shield Marble, Granite and Travertine sealer. The product must be applied by professionals or under the strict instruction as indicated by the manufacturer. Sealers may cause enhancement of the natural colours of the stone depending on the stone type and the sealer used. Please speak to a consultant should you wish to have a demonstration of the finished product.

For everyday maintenance we recommend Stone Shield Daily Clean or a neutral Ph detergent. Do not use acid or alkaline detergents as repeated application will damage the sealer leaving the stone unprotected.

Remember to ask us about your warranty options.

The colours shown on this spec sheet are as exact as photographic and printing processes as well as screen resolution allow. We recommend that all colours are chosen from actual product samples available on request.
